

## Handheld remote and contactless bio-sensing device

The Biometric Sensor can be used for smart/securing access, well-being, health and general monitoring. ContinUse Biometrics' products provide the capability to monitor people's health by utilising a unique and patented method for nano-level detection and analysis of vibrations associated with movement of internal organs and of molecules.

### Benefits:

- Enables the continuous measurement of 20+ bio-parameters with high accuracy and data extraction
- Agnostic to distance up to several hundred meters, clothing and age
- Capability to perform at any position
- Agnostic to environmental influences such as sweat and reflected light
- Compliance of measurement with various regulations and privacy aspects
- Compact and affordable
