

MatchBox Series, 2nd edition

With analytical instruments getting smaller, integrators desire more compact light sources: CW pulsed lasers and wavelength combiners.

The MatchBox series offers high-performance laser solutions for spectroscopy applications: Raman, LIBS, Microscopy, Holography, and LiDAR. It is very diverse in its technology (diode, VBG diode, DPSS, Q-Switch, dichroic combiner with 4 diode wavelengths) and has 150 product configurations in the same robust yet ultra-compact (30x50x16 mm³) format. It will enable analytical instruments to become smaller and more affordable, enhancing point-of-care diagnostics, food safety and homeland security.

Benefits:

- Ease of integration with unified control interface
- Compatibility throughout the series
- Low cost
- Output parameters of most configurations rank among top 5 worldwide
- Rich set of accessories
